

# Meladine™

## A Natural Melanin Enhancer

### **Suggested use for light brown, blonde, or vellus hair:**

- 1) Begin your **daily** Meladine routine **14 days prior** to each laser treatment.
- 2) It is important that the hair be clipped or shaved daily. Do NOT wax, tweeze, or use depilatories on the area between treatments.
- 3) Always apply Meladine to clean skin. Do not use cosmetic preparations prior to application of Meladine.
- 4) In the morning, spray the area to be treated with Meladine one time, and allow to dry. Repeat this spraying and drying process 4-6 times. It is imperative that Meladine be allowed to DRY BETWEEN EACH SPRAY. Hold sprayer 3-5 inches away from area to be treated.
- 5) Research has indicated that gently patting the Meladine into the skin before drying can help with absorption.
- 6) Repeat step 4 in the evening.

Store in a cool dry place. Refrigeration is recommended for storage of Meladine between laser treatments.

### **Note:**

For maximum results, product must be used as directed daily for 14 days prior to treatment. Results may vary depending on proper use, patient compliance and other variable factors.

### **WARNING:**

For external, topical use only. Avoid contact with eyes. Keep out of reach of children. Users with known sensitivity to 2-phenoxyethanol should not use this product.

### **Ingredients:**

Water, glycerol, melanin, natural soy lecithin, 2-phenoxyethanol 0.55% as a preserving agent.
